Summer 2017

- Applied Bayesian Search Theory and knowledge of Multivariable Calculus to create an algorithm for the classic game of Battleship.
- Designed and implemented a ship-seeking algorithm that is 53% more efficient (in # moves) than random firing, 23% better than naive searching.

MULTIVARIABLE PREDICTION MODELING | JAVA/GSON/XCHART

Fall 2016

- Worked with a team to replicate a grading system used by the game League of Legends by creating a multivariable input (kills, assists, deaths, etc) linear regression model that is tested by k-fold cross-validation using data scraped from the game's public API.
- Utilized feature engineering to create and improve parameters for our model.
